Experience

Avito

- *Software Engineer, STaaS* — *Oct. 2023 - Present*

Go | Kubernetes | S3 | Python

  - Launched isolated S3 environments as an autonomous service: independent service discovery and secret storage, availability even when cut off from the rest of the platform, serving **2.7k+ buckets for 48 teams**.
  - Built zero-downtime S3 bucket migration across **dozens of clusters** of a **petabyte-scale** platform: a custom migrator with distributed locks and a fully S3-compatible proxy sustaining **15k RPS** with under **20 ms** added latency during live migrations.
  - Initiated and feature-led the design of a cold storage tier for archiving **petabytes** of backups with consistency verification for sharded databases, landing it on the platform's annual roadmap.
  - Integrated LLM tooling into daily work: **1.9x** the team's average velocity and **top-1 in AI adoption** in the unit.
  - Led the development of a backup verification platform that **verifies all backups across the entire company**: **10k+ backups daily** across multiple storage systems, up from monthly checks.
  - Engineered a verification scheduling algorithm accounting for database size, priority, and cluster load, delivering **2–3x faster verifications** (from 5h to 2h for 11 TB) and **20%+ lower peak Ceph load**.
  - Implemented automated volume expansion via the Kubernetes Controller and CSI driver, **reducing expansion time by 90%**.

Tinkoff

- *Site Reliability Engineer - Intern, DWH Ingest* — *March 2023 - June 2023*

Java | Kubernetes | Kafka

  - Co-engineered a solution for **zero-downtime** migration of **hundreds of** Kafka topics across clusters utilizing Schema Registry.
  - Migrated builds to Artifactory with JAR caching, **speeding up repeat builds by 35–40%**.

Playrix

- *Software Engineer - Intern, Automation Team* — *July 2022 - Sept. 2022*

Python | AWS | Vault | Consul

  - Led the transition of internal automation serving **~4k employees** from a monolith to microservices.

Education

ITMO University

- *Master's degree, Highload Systems Software* — *Sept. 2024 - June 2026*

Thesis: Zero-downtime S3 bucket migration across clusters (among the program's best theses)

ITMO University

- *Bachelor's degree, Software Engineering* — *Sept. 2020 - July 2024*

Thesis: Automated backup verification platform

Achievements

- **Yandex Contributions** — *2023 - 2025*

C++ | Go | LSP

  - Co-developed LSP features (declaration lookup, usage search) at SourceCraft, introducing incremental caching for performance.
  - Benchmarked multiple C++ hashtable implementations in aggregation workloads for the YDB query engine.
  - Ranked **top 2 out of 46** students in the Yandex School of Backend Development, while collaborating in an 11-member team to build a platform **allocating 100+ students** to projects based on their preferences.

- **Community Contributions** — *2023 - 2025*

FerretDB | Mentoring

  - Implemented nested-field index creation in FerretDB's SQLite driver, merged upstream.
  - Mentored **40+ students** in the VK course, completing **500+ code reviews**.

- **School Olympiads** — *2020*

Competitive programming | Mathematics

  - Prize-winner of the National Mathematics Olympiad (MIPT), awarded a **full tuition** waiver at university.
  - Prize-winner of the regional round of the National School Olympiad in Programming.

Skills

- **Technologies**: Kubernetes, Docker, Linux, Ceph, PostgreSQL, MongoDB, Redis, Kafka, Consul, Vault
- **Interests**: HFT, Databases, Distributed Systems, FP, Concurrency, Optimizations, AI
- **Programming Languages**: Go, Rust, Python
